BASIC HAZARDOUS WASTE GENERATOR WORKSHOP

WORKSHOP OVERVIEW

- •Will not be a substitute for training your employees (job specific training is still required).
- •Will introduce you to the basics of RCRA.
 - Waste Classification (waste determination)
 - Managing Containers
 - Generator Requirements
 - Compliance and Enforcement Overview
- Opportunity for questions.

REGULATORY BACKGROUND

- Resource Conservation & Recovery Act (RCRA) enacted in 1976
- EPA implemented hazardous waste regulations in 1980
- Kansas Hazardous Waste Program began in 1982
- Major revisions to Kansas Hazardous Waste Program effective April 29, 2011

Why???

Why???

RCRA OVERVIEW

- The Resource Conservation and Recovery Act, or RCRA, is a cradle to grave law.
 - All waste must be evaluated and properly managed from the point of generation until final disposal.
 - Everyone handling, managing, and otherwise being in possession of that waste at the point of generation until final disposal can be held responsible for that waste.
 - Ignorance of the law is not an excuse for not following the law.

GENERATOR'S RESPONSIBILITY

- Generators must:
 - Identify all solid and hazardous waste streams
 - Determine quantity of each hazardous waste generated over time (no averaging)
 - Ensure proper handling and disposal of all wastes

WASTE STREAMS

- Waste Streams:
 - How much of each waste stream is generated in a month?
 - How is each managed/contained/stored?
 - How is each disposed?
 - Is it hazardous waste?
 - How did you determine whether or not it was hazardous?
 - What documentation do you have for your determination?

- First, is it a discarded material? A material is considered discarded if it is:
 - Abandoned (disposed, burned, accumulated, treated, or stored)
 - Recycled (spent solvent in distillation system)
 - Considered inherently waste-like

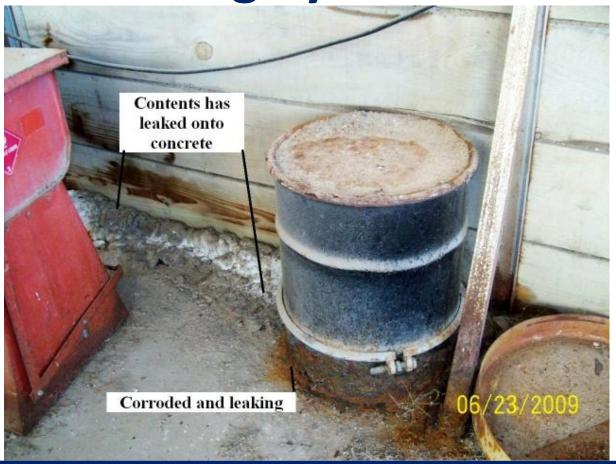

Abandoned?

Abandoned? Is this how you manage your raw materials?

- Second, is it a SOLID WASTE?
 - Solid waste can be:
 - Liquid
 - Semi-Solid
 - Gas
 - Materials are solid waste even if they are recycled or are accumulated, stored, or treated prior to recycling.

and Environment

Third, is the waste specifically excluded (40 CFR 261.4)?

Discharged to the POTW or a permitted NPDES outfall

- Mining overburden
- Household waste
- Agricultural waste

- Determinations can be made in two ways:
 - Knowledge of process (or Generator Knowledge)
 - Testing by KDHE certified laboratoryhttp://www.kdhe.state.ks.us/envlab/
- All waste determinations must be documented.

• Is it "<u>listed</u>" hazardous waste?

• Is it "characteristic" hazardous waste?

LISTED HAZARDOUS WASTE

- Does the waste appear on the F, K, P, or U lists?
 - F-Listed (non-specific sources)
 - K-Listed (specific sources)
 - P-Listed (acutely hazardous discarded commercial chemicals-regulated at 2.2 lbs)
 - U-Listed (discarded commercial chemicals)

CHARACTERISTIC HAZARDOUS WASTE

Does the waste meet one of the four characteristics?

Ignitability (D001)

(Flashpoint less than 140 °F)

Reactivity (D003)

Corrosivity (D002)

 $(pH \le 2 \text{ or } \ge 12.5)$

Toxicity (D004 –D043)

TOXICITY

 Analyze using Toxicity Characteristic Leaching Procedure (TCLP) for one or more of the following:

- Heavy Metals
- Volatile Compounds
- Pesticides/Herbicides
- Base Neutral Acids

DOCUMENT THE DETERMINATION

- Document how each waste determination was made.
- Required for hazardous and non-hazardous waste.
- Include copies of all supporting documentation that was used (analytical reports, design plans, MSDSs, etc.).
- Waste profiles by themselves are not generally sufficient waste determinations or documentation.
- Keep documentation for 3 years from the date the waste was last shipped off site.

DOCUMENT THE DETERMINATION

- Don't rely entirely on your contractor and/or waste disposal company.
 - It is the your (generator's) responsibility to make the waste determination;
 - You (the generator) sign the manifest confirming that the information is correct;
 - The contractor may not know very much about your processes and may miss listed and characteristic hazardous waste (HW);
 - You receive the violations, not the contractor!

HAZARDOUS MATERIALS VS HAZARDOUS WASTES

- Medical Waste waste generated in connection with human or animal care, which is potentially capable of causing disease or injury. Not necessarily a hazardous waste, but probably a "special waste".
- Used Oil Used oil that is recycled for energy or material recovery is not subject to the hazardous waste regulations.

and Environment

MANAGEMENT ON-SITE

On-site accumulation can occur in:

- Satellite Accumulation Containers (satellite containers)
- Storage Containers (less than 90-day or less than 180-day accumulation containers)
- Tanks

MANAGEMENT ON-SITE

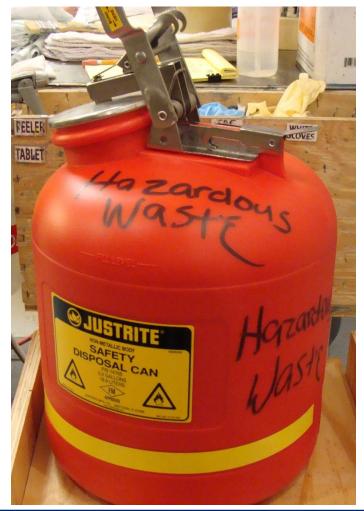

- All containers and tanks must be:
 - labeled with the words "Hazardous Waste"
 - in good condition and compatible with the contents of the container or tank
 - kept closed unless actively adding or removing waste

- Satellite containers must meet the following requirements:
 - Be at or near the point of generation
 - Under the control of the operator
 - Only 1 container for each waste stream at each point of generation (more stringent than EPA)
 - 55 gallons or less in size
 - Marked with the words "Hazardous Waste"
 - Closed and in good condition

GOOD SATELLITE CONTAINERS

GOOD SATELLITE CONTAINERS

Good funnels, signage, and use of KDHE poster

Department of Health and Environment

Not marked "hazardous waste" and open

Open containers

Open container

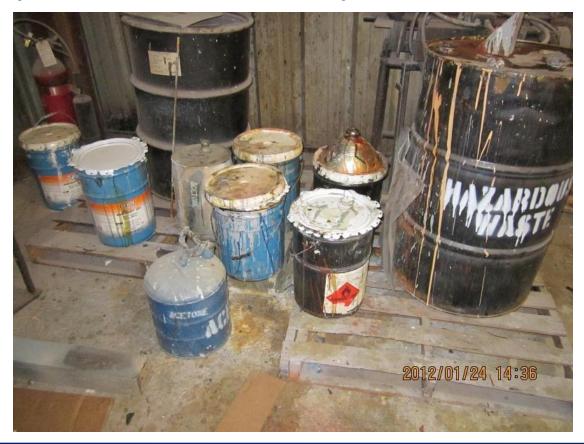

Open containers - some cannot be closed.

ansas –

Department of Health and Environment

Open containers very difficult to close.

 Does not meet the definition of satellite (more than 55 gallons)

- Can have as many storage containers and storage areas as necessary at the facility.
- Can be located indoors or outside (we recommend that they be under cover, and/or on pallets, but it is not required).
- Secondary containment is recommended but is not required.
- LQGs must store ignitable hazardous waste at least 50 feet from the property line.

- Storage containers must meet the following requirements:
 - Incompatibles must be separated (this includes separating waste from products to which they are incompatible)
 - Aisle space must be adequate to allow unobstructed movement of people and equipment in case of an emergency

- Requirements for storage containers (cont.)
 - Marked with the words "Hazardous Waste"
 - Marked with the accumulation start date (date that storage began)
 - Closed and in good condition

- Must be inspected weekly (LQG and SQG) or monthly (KSQG and accumulating CESQG).
 - Should include review of all storage container requirements
 - Must inspect for deterioration and leaks
- Inspections must be documented and records maintained on-site for 3 years. Must document all of the following:
 - Date and time of the inspection
 - Name of the inspector (not initials)
 - Notation of the observations made
 - Date and nature of any repairs or other remedial actions

STORAGE CONTAINERS

- Accumulation time limits:
 - LQGs 90 days or less
 - SQGs 180 days or less (or 270 days or less if the waste is transported more than 200 miles)
 - If exceed 13,200 lbs (6,000 kg) of hazardous waste on-site or exceed time limit, then must meet **TSDF** requirements (obtain a permit).
 - KSQGs and CESQGs No accumulation time limit (unless you accumulate more than 2,200 pounds onsite, then you become a SQG and the 180-day limit starts)
 - Exceeding time limits could require a permit and/or paying fees for the higher generator class or TSDF.

GOOD STORAGE AREAS

Good aisle space

GOOD STORAGE AREAS

Good outdoor storage (prefer only 2 drums)

high)

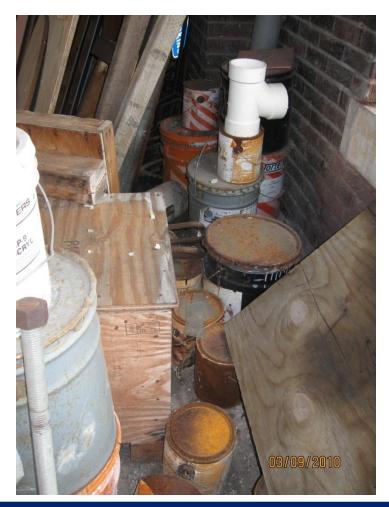

Aisle space is a problem

Can these be properly inspected?

Condition of container is a problem

Open container

Not clearly marked "Hazardous Waste"

GENERATOR CLASSIFICATIONS

- LQG Large Quantity Generator
 - Generates 2,200 pounds (lbs) or more of HW per month; and/or
 - Generates 2.2 lbs or more of acutely HW per month; and/or
 - Accumulates more than 2.2 lbs of acutely HW on-site at any time.
- SQG Small Quantity Generator
 - Generates more than 220 lbs but less than 2,200 lbs of HW per month; and
 - Generates less than 2.2 lbs of acutely HW per month; and
 - Accumulates less than 2.2 lbs of acutely HW at any time.

GENERATOR CLASSIFICATIONS

- KSQG Kansas Small Quantity Generator
 - Generates 55 lbs or more but 220 lbs or less of HW per month; and
 - Generates less than 2.2 lbs of acutely HW per month; and
 - Accumulates less than 2.2 lbs of acutely HW at any time.
- CESQG Conditionally Exempt Small Quantity Generator
 - Generates less than 55 lbs of HW per month; and
 - Generates less than 2.2 lbs of acutely HW per month; and
 - Accumulates less than 2.2 lbs of acutely HW at any time.

GENERAL REQUIREMENTS

- KSQGs, SQGs, and LQGs must meet the following requirements:
 - Obtain an EPA ID number;
 - update Notification form within <u>60 days</u> of information changing
 - pay an annual monitoring fee to KDHE

- SQGs and KSQGs must meet all of the following requirements if they accumulate hazardous waste on-site:
 - Have an emergency coordinator available 24/7
 - They should be able to reach the facility within 30 minutes.
 - They should be familiar with emergency procedures and locations of waste.
 - Post the following next to a telephone
 - Name and telephone number of emergency coordinator;
 - Location of fire extinguishers, spill control material and fire alarm (if present);
 - Telephone number of the fire department, unless direct alarm is available.

and Environment

- SQGs and KSQGs (Continued)
 - Provide training to employees to ensure that all personnel are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies
 - Provide training within 6 months of hire or transfer to a new position;
 - Provide annual training;
 - Document the training and maintain records for 3 years.

LQGs

- Prepare and maintain (update) a contingency plan that meets all of the requirements of 40 CFR 265 Subpart D.
- Ensure that the contingency plan is available in case of an emergency.
- Train employees and maintain required training records.

- All KSQGs, SQGs, and LQGs must:
 - Equip the facility with:
 - Internal communications or alarm system
 - A device such as a telephone or hand-held two-way radio capable of summoning emergency assistance from local emergency responders
 - Portable fire extinguishers, fire control equipment, spill control equipment, and decontamination equipment
 - Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems

- All KSQGs, SQGs, and LQGs:
 - Must attempt to make arrangements with local emergency organizations including:
 - Familiarize police, fire departments, and hospitals with facility, hazardous waste handled, etc.
 - Where more than one department might respond, designate one as the primary emergency authority.
 - Maintain agreements with state emergency response teams, emergency response contractors, and equipment suppliers as necessary.

- All KSQGs, SQGs, and LQGs, must:
 - Maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste.
 - Test and maintain all emergency and communications equipment to assure proper operation in emergency.
 - Ensure personnel have immediate access to internal alarm or emergency communication device when handling hazardous waste.

COMPLIANCE EVALUATION INSPECTION

- Inspections are unannounced (unscheduled)
- Routine inspections are chosen months in advance, based on the following:
 - Generator classification
 - Amount of time since last inspection
 - Industry sector priorities established by EPA or KDHE
 - Enforcement
- Complaints can result in a full RCRA inspection
- Compliance Assistance Visits (CAV) are available

COMPLIANCE EVALUATION INSPECTION

- Inspections can be broken into four basic parts:
 - Introduction and review of information
 - Walk-through inspection of facility
 - Records review
 - Exit briefing

RESOURCES AVAILABLE

- Hazardous Waste Generator Handbook
- Compliance/Training Manual
- Inspector Checklists
- Technical Guidance Documents and Policies
- CD
- Website
- Miscellaneous other resources

RESOURCES AVAILABLE

- KDHE wants to help all generators achieve compliance. Please call us with any questions. (We don't have caller ID.)
- Small Business Environmental Assistance Program (SBEAP) operated by the Pollution Prevention Institute (PPI) at KSU 1-800-578-8898 (free anonymous assistance).
